Kernaussage: Prävention leidet an zunehmender Fragmentierung zwischen Generalisten und Spezialisten – Notwendigkeit der Kombination der jeweiligen Stärken

Continuity of Care (CoC) is the generalist's tool

Relational continuity with a regular general practitioner was shown (Cohen and Lindman 2024) to:

To coincide with better health outcomes including reduced morbidity and overall mortality rates

To be highly appreciated by patients

To be essential part of qualitative care from the clinicians perspective

Relational continuity with a patient-centered approach means

Most contacts with same physician (RGP)**CoC Index**

Context information (history, family, circumstances, values..)

Special, long-standing relationship: trust

First point of contact, dispatching, gatekeeping, even coordinating works without CoC.

Family medicine according to the definition does not.
